

Pristine Cleaning Solutions Inc.

Our Pristine Promise: Protecting you from COVID 19

Phase 1: Points of Contact

We believe that it is vitally important to begin the process by using our CDC recommended solution to sanitize and wipe areas frequently touched by personnel and customers.

Phase 2: Disinfecting Surfaces and the Air

In this step, CDC recommended solution is released via our Atomizer Particle Fogger Machine. The solution sanitizes both the air and all other contents and surfaces within every square inch of the facility.

Phase 3: Due Diligence & Security

After the facility is disinfected, we conduct a thorough walkthrough of the facility to ensure that all frequently touched surfaces have been properly cared for.
